

Let's make Pecka solar!

Solarna Pecka is an initiative aiming to bring a clean and sustainable energy source, solar energy, to Pecka village (Bosnia & Herzegovina), in the frame of the center for rural sustainable tourism “**Visitor Center Pecka**”, and through a citizen’s community direct engagement and financing model.

This pioneer initiative is promoted by the Bosnian NGOs “Greenways – organization for the support of sustainable development” and “Center for Environment (CZZS)/Friends of the Earth Bosnia-Herzegovina”. Both organizations cooperate since the very foundation/beginning of “Visitor Center Pecka” and together they have decided to make this successful story even more successful by promoting renewable energy sources and investing in a sustainable future.

Solar energy is nowadays not only a future perspective but a reality in many parts of the world. With a prosuming example in Pecka we want to promote and foster this sustainable energy source, demonstrating that in Bosnia and Herzegovina energy can also be obtained from the sun. This initiative first step is focused in making solar prosuming possible in Pecka, through installing a Solar thermal collectors and PV panels system for producing warmth and electricity in the roof of Visitor Center Pecka.

In order to give the chance to all citizens to support and get engaged in this initiative, and be able of gathering the needed funding for installing the planned solar system, we are launching an online crowdfunding campaign in the beginning of june. Everybody will have the chance to participate in this campaign and be part of this initiative, from individuals to companies and organizations, with smaller or bigger contributions.

Your support to this campaign will mean a lot to the success of this small but very relevant sustainable energy local initiative.

Every contribution is more than welcome!
