## JOINT STATEMENT Blue is not Green

A new proposed amendment to the Gas Directive would allow Member States to take into account lowcarbon fuels, including low-carbon hydrogen, to meet
> renewable hydrogen targets for industry and transport in the Renewable Energy Directive (RED).

## Why we urge you to reject this proposal

It undermines the integrity, the credibility and market trust in EU legislation promoting renewable energy.

It removes a crucial market signal to drive investment in renewable hydrogen.

Nuclear and fossil based hydrogen are not renewable hydrogen and should not be treated as such.

The place for low-carbon fuels and hydrogen is in the Gas Package, while the RED and its targets are for renewable fuels and renewable hydrogen.
